

proposal for 1495

AC-SV.

July 26, 2006

Overview: this proposal restricts assignments to local variables to assignment where the bit select on the left hand side (if exists) is a constant. This is done by adding a footnote

Changes:

Annex A.8.5 :

Replace

```
variable_lvalue ::=  
  [implicit_class_handle .|package_scope] hierarchical_variable_identifier select  
  | {variable_lvalue{, variable_lvalue}} | [assignment_pattern_expression_type] assignment_pattern_variable_lvalue  
  | streaming_concatenation
```

with

```
variable_lvalue ::=  
  [implicit_class_handle .|package_scope] hierarchical_variable_identifier select 1  
  | {variable_lvalue{, variable_lvalue}} | [assignment_pattern_expression_type] assignment_pattern_variable_lvalue  
  | streaming_concatenation
```

¹In a variable_lvalue that is assigned within a sequence_match_item any select shall also be a constant_select.
