

Objectives

Fix a typo: Instead of “occur” should be “occurs”.

38.4.1 Placing assertion system callbacks

CHANGE

— **cbAssertionSysOn**. The assertion system has become active and starts processing assertion attempts. This always occur after **cbAssertionSysInitialized**. By default, the assertion system is “started” on simulation startup, but the user can delay this by using assertion system control actions.

TO

— **cbAssertionSysOn**. The assertion system has become active and starts processing assertion attempts. This always ~~occur~~ **occurs** after **cbAssertionSysInitialized**. By default, the assertion system is “started” on simulation startup, but the user can delay this by using assertion system control actions.
