

Motivation

There is an editor note on page 328, Draft6, "The \equiv should be defined before use." Adding its definition here.

16.9.3 Global clocking past and future sampled value functions

REPLACE

The behavior of the global clocking past sampled value functions can be defined using the sampled value functions as follows:

WITH

The behavior of the global clocking past sampled value functions can be defined using the sampled value functions as follows (the symbol \equiv means here "is equivalent by definition"):
